

Genuine DEUTZ Xchange Engines and Parts

The engine company.

DEUTZ Xchange engines and parts - the fast, reliable and practical solution.

„New life for old engines” – a service which engine manufacturers all over the world have long been providing to their customers under the title of “general overhaul” or “replacement engine”.

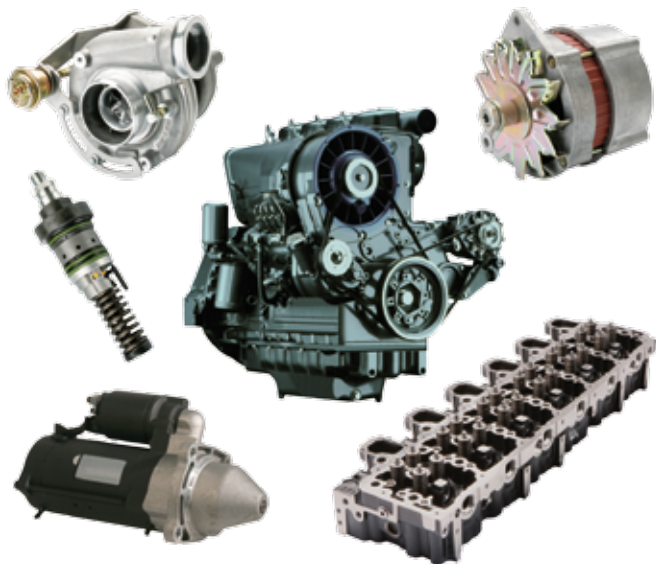

Today, in contrast to the passive philosophy of simply “reuse” DEUTZ is adopting an active philosophy of continued use, with the application of industrial reconditioning processes. This means that the “end of an engine or part” is now a thing of the past, and economic and environmental benefits can now be gained from a source of energy that was previously sorely neglected.

In a worldwide service network, through its existing sales structures in more than 130 countries, DEUTZ is able to offer and supply reconditioned engines and parts of superior quality.

Every one of our Xchange engines or parts shares in the benefits of technological advance since:

- All wearing parts are renewed.
- All components are brought up to state-of-the-art technology.
- The quality is equivalent to a new engine or part (warranty, reliability and service life).

Xchange engines or parts are available at short notice, even from phased-out series.
